

SOLUTIONS

NUTec have designed a range of auxiliary components allowing easy access to EFI VUTEk printers without the need to use the existing OEM ink configuration.

These components consist of specially designed couplers to work with OEM type connectors. These are specifically suited ink bottles to fit into the OEM space. NUTec has UV inks suitable for hybrid as well as roll to roll applications in 5L for colours and 3L for white.

The custom design provides an easy solution that gives an OEM professional look and feel which also allows for a simplistic conversion process.

EFI VUTEk FEATURES

- Affordable OEM equivalent
- Customized Components
- Easy Installation
- Little to no wastage

Ref.no. NU SOL 2017.06. All trademarks recognised. E&OE.
